

Hyeonsang Kim

(Maximus Kim)

hyeonsang@wigtn.com · github.com/HyeonsangKim · Seoul, Republic of Korea

Interests

Production engineering for AI products, including AI development workflows, authentication and messaging backends, and mobile clients.

Work Experience

Jan 2026 - Present

WIGTN

AI Product Engineer, AI Research & Engineering Company

- Co-developed WIGTN-Coding, an open-source Claude Code plugin that adds automatic checks at the planning, review, and commit stages of AI-assisted development.
- Built the OpenAI Codex version of WIGTN-Coding, which checks each PRD requirement against the code and test results.

Feb 2025 - Jun 2026

Soundmind

Team Lead, MX Team

- Led mobile, auth server, and web development for B2B apps preinstalled on kids' phones, released on the App Store and Google Play.
- Cut DB write load by 95% in a child location-tracking app by batching location updates in Redis, which ended repeated server outages.
- Added geofence alerts and an OTA update pipeline to the same app.
- Built domain blocking, app blocking, and remote control for a parental device-management app using Samsung Knox, AccessibilityService, and FCM.
- Fixed ANRs in that app by moving slow Knox calls to background threads.
- Separated the auth server from business services and added refresh-token reuse detection, RBAC, audit logging, and blue-green deployment.
- Replaced auth polling between services with webhooks, with retries and a dead-letter queue for failed events.
- Built a Korean speaking test platform for a KOCCA government R&D project and cut STT server calls by about half by encoding audio in the browser.

Jun 2023 - Jun 2024

Purple Academy

Frontend Developer

- Moved the Purple English web app from React to React Native and released it on iOS and Android.
- Built over 5,000 interactive English activities, including alphabet tracing with GSAP and SVG.

Apr 2022 - Mar 2023

IEZLAB

Software Engineer, Development Team 1

- Built a Canvas API tool that splits classical Chinese documents into single characters, and the Spring Boot backend, for AIGOSEO, a government R&D project.

Hackathons

[BUILD WITH TRAE SEOUL · BYTEDANCE · GRAND PRIZE](#)

WIGENT: Multi-Agent Debate Platform for Business Ideas

Multi-agent debate platform where an orchestrator spawns topic-specific expert agents around a persistent PM agent, retires and replaces them between rounds, and synthesizes the final round into a generated landing page. The debate streams over SSE into a Slack-style UI. Next.js, GPT-4o.

[SNOWFLAKE AI & DATA HACKATHON 2026 KOREA · 2ND PLACE, TECH TRACK](#)

WIGTN FLAKE: Purpose-Driven Neighborhood Intelligence Platform

A GPT-4o orchestrator summons five purpose-specific expert agents that cross-query four datasets (real estate, foot traffic, card spending, telecom) through Snowflake Cortex Analyst text-to-SQL and debate the results. Cortex FORECAST and ANOMALY_DETECTION feed the final Top 3 recommendation, with fallback from Cortex Agent to direct Cortex Analyst calls and GPT-4o function calling.

Myunzy: AI Mock Interviewer on a Small Open Model

Mock interview agent that builds an interviewer from a resume and a real job posting and presses on weak answers with follow-up questions. The small EXAONE-4.5 model runs inside a tool-calling harness: DeepAgents wrap_tool_call middleware validates each call and re-prompts on failure, a LangGraph controller runs the turn loop, and scoring is computed in code.

GOOGLE CLOUD RAPID AGENT HACKATHON

Custos: Always-On AI Code Review Bot for GitLab

Self-evolving GitLab custodian with two lanes, a reactive lane that reviews merge requests and a proactive lane that sweeps merged code and files issues. An ADK LlmAgent triage orchestrator picks GitLab tools over MCP and routes each review, and new review skills are induced from real incidents, gated against false positives, and promoted into the skill library. Google ADK, Vertex AI Gemini, GitLab MCP, Cloud Run.

GEMINI LIVE AGENT CHALLENGE · GOOGLE

TimeLens: Multimodal AI Museum Curator

Real-time museum curator that recognizes artifacts through the camera and talks about them by voice on the Gemini Live API. Tool calls handle artifact recognition, restoration images of damaged pieces, nearby museum search, and an auto-written visit diary. Gemini Live API, Google ADK, Cloud Run.

Education

Feb 2018 - Feb 2020

Dongyang Mirae University

Associate degree in Computer Information Engineering

Honors & Awards

May 2026	Top 6, OBA Weekendthon Season 1 Team WIGTN, Myunzy
Apr 2026	2nd Place, Tech Track, Snowflake AI & Data Hackathon 2026 Korea Team WIGTN, WIGTN FLAKE
Mar 2026	Grand Prize, Build with TRAE Seoul, ByteDance Team WIGTN, WIGENT

Certifications

Aug 2022	Industrial Engineer Information Processing (정보처리산업기사) HRD Korea
