

Hyeonsang Kim

(Maximus Kim)

hyeonsang@wigtn.com · github.com/HyeonsangKim · Seoul, Republic of Korea

Interests

Production engineering for AI products, including AI development workflows, authentication and messaging backends, and mobile clients.

Work Experience

Jan 2026 - Present

WIGTN

AI Product Engineer, AI Research & Engineering Company

- Co-developed WIGTN-Coding, an open-source Claude Code plugin that adds automatic checks at the planning, review, and commit stages of AI-assisted development.
- Designed and built WIGTN-Coding for Codex, an AI development workflow harness that chains PRD writing, task planning, requirement verification, and release checks into one skill pipeline.

Feb 2025 - Jun 2026

Soundmind

Team Lead, MX Team

- Led mobile, auth server, and web development for B2B apps preinstalled on kids' phones, released on the App Store and Google Play.
- Cut DB write load by 95% in a child location-tracking app by batching location updates in Redis, which ended repeated server outages.
- Built geofence entry alerts and an OTA code-push pipeline for the location-tracking app.
- Built domain blocking, app blocking, and remote control for a parental device-management app using Samsung Knox, AccessibilityService, and FCM.
- Fixed ANRs in the device-management app by moving slow Knox calls to background threads.
- Separated the auth server from business services and added refresh-token reuse detection, RBAC, audit logging, and blue-green deployment.
- Replaced auth polling between services with webhooks, with retries and a dead-letter queue for failed events.

- Built a Korean speaking test platform for a KOCCA government R&D project and cut STT server calls by about half by encoding audio in the browser.

Jun 2023 - Jun 2024

Purple Academy

Frontend Developer

- Moved the Purple English web app from React to React Native and released it on iOS and Android.
- Built over 5,000 interactive English activities, including alphabet tracing with GSAP and SVG.

Apr 2022 - Mar 2023

IEZLAB

Software Engineer, Development Team 1

- Built a Canvas API tool that splits classical Chinese documents into single characters, and the Spring Boot backend, for AIGOSEO, a government R&D project.

Hackathons

[BUILD WITH TRAE SEOUL](#) · [BYTEDANCE](#) · [GRAND PRIZE](#)

WIGENT: Multi-Agent Debate Platform for Business Ideas

Multi-agent debate platform in which an orchestrator spawns and retires expert agents around a PM agent and turns the conclusion into a landing page.

[GITHUB](#)

[SNOWFLAKE AI & DATA HACKATHON 2026 KOREA](#) · [2ND PLACE, TECH TRACK](#)

WIGTN FLAKE: Purpose-Driven Neighborhood Intelligence Platform

Location recommendation platform in which an orchestrator assigns purpose-specific expert agents to cross-analyze real estate, foot traffic, card spending, and telecom data on Snowflake Cortex.

[OBA WEEKENDTHON SEASON 1](#) · [TOP 6](#)

Myunzy: AI Mock Interviewer on a Small Open Model

Mock interview agent that runs the small EXAONE-4.5 model inside a DeepAgents and LangGraph tool-calling harness, building an interviewer from a resume and a real job posting and drilling into weak answers with follow-up questions.

[GITHUB](#)

GOOGLE CLOUD RAPID AGENT HACKATHON

Custos: Always-On AI Code Review Bot for GitLab

Self-evolving GitLab code review agent in which an ADK triage orchestrator reviews merge requests, sweeps merged code on a schedule, and learns new review skills from real incidents.

[GITLAB](#)[DEVPOST](#)

GEMINI LIVE AGENT CHALLENGE · GOOGLE

TimeLens: Multimodal AI Museum Curator

Multimodal AI curator on the Gemini Live API that recognizes artifacts through the camera, explains them by voice in real time, and generates restoration images.
