Interests

Production engineering for AI products, including AI development workflows, authentication and messaging backends, and mobile clients.

Work Experience

Jan 2026 - Present

WIGTN

AI Product Engineer, AI Research & Engineering Company

- Co-developed WIGTN-Coding, an open-source AI development workflow plugin for Claude Code, designing automated verification gates at the planning, review, and commit stages.
- Built the same workflow as an OpenAI Codex plugin, with a verification skill that maps each PRD requirement to the code and test runs that satisfy it.

Feb 2025 - Jun 2026

Soundmind

Team Lead, MX Team

- Led mobile, auth server, and web development for apps preinstalled on B2B kids' phones, released on the App Store and Google Play.
- Redesigned location data ingestion with Redis dual-queue batching and date-partitioned tables, cutting DB writes by about 95% and ending repeated outages at 3,000–5,000 events per minute.
- Resolved ANRs in the device-control app by tracing them to React Native bridge queue backlog and Samsung Knox IPC latency, and moving native work off the main thread.
- Separated the auth server from business services to contain auth failures, and introduced refresh-token rotation with token-family tracking to revoke sessions on token reuse.
- Replaced auth-state polling with webhooks, backed by retries, a dead-letter queue, and an admin console for reprocessing failed messages.
- Applied Redis rate limiting, RBAC, audit logging, and automated anonymization and deletion of dormant and withdrawn user data.

- Built a Korean speaking test platform for a KOCCA government R&D project, encoding 16 kHz WAV in the browser to remove server-side conversion and cut STT server calls by about half.

Jun 2023 - Jun 2024

Purple Academy

Frontend Developer

- Migrated the Purple English web app from React to React Native and released it on iOS and Android as one of two developers.
- Built 5,000+ interactive English learning activities, including SVG path-based alphabet tracing with GSAP.

Apr 2022 - Mar 2023

IEZLAB

Software Engineer, Development Team 1

- Built a Canvas API character segmentation tool and Spring Boot + JPA backend APIs for AIGOSEO, a government R&D platform for digitizing classical Chinese documents.

Hackathons

[BUILD WITH TRAE SEOUL](#) · [BYTEDANCE](#) · [GRAND PRIZE](#)

WIGENT: Multi-Agent Debate Platform for Business Ideas

AI agents debate a business idea and turn the outcome into a landing page. Built the debate interface, real-time streaming, and landing page generation from nine templates in a team of four.

[GITHUB](#)

[SNOWFLAKE AI & DATA HACKATHON 2026 KOREA](#) · [2ND PLACE, TECH TRACK](#)

WIGTN FLAKE: Purpose-Driven Neighborhood Intelligence Platform

An AI expert panel cross-analyzes real estate, foot traffic, card spending, and telecom data to recommend locations by purpose. Built three Snowflake Cortex specialist agents and the agent that moderates their debate in a team of four.

[OBA WEEKENDTHON SEASON 1](#) · [TOP 6](#)

Myunzy: AI Mock Interviewer on a Small Open Model

Creates an interviewer from a résumé and a real job posting, then asks follow-up questions on weak answers. Runs EXAONE-4.5 inside a tool-calling harness on DeepAgents middleware, with scoring done in code. Built most of the system in a team of three.

GOOGLE CLOUD RAPID AGENT HACKATHON

Custos: Always-On AI Code Review Bot for GitLab

Reviews merge requests and keeps checking merged code. Built post-merge quality signal collection, automatic skill generation and validation, the ADK triage orchestrator, and incident memory in a team of four. Google ADK, Vertex AI Gemini, GitLab MCP, Cloud Run.

[GITLAB](#)[DEVPOST](#)

GEMINI LIVE AGENT CHALLENGE · GOOGLE

TimeLens: Multimodal AI Museum Curator

Recognizes artifacts through voice and camera and explains them in real time. Built the core Gemini Live pipeline, voice interruption handling, and artifact restoration image generation.
