

Hyeonsang Kim

(Maximus Kim)

hyeonsang@wigtn.com · github.com/HyeonsangKim · Seoul, Republic of Korea

Interests

Production engineering for AI products, including AI development workflows, authentication and messaging backends, and mobile clients.

Work Experience

Jan 2026 - Present

WIGTN

AI Product Engineer, AI Research & Engineering Company

- Co-developed WIGTN-Coding, an open-source Claude Code plugin that adds automatic checks at the planning, review, and commit stages of AI-assisted development.
- Built the OpenAI Codex version of WIGTN-Coding, which checks each PRD requirement against the code and test results.

Feb 2025 - Jun 2026

Soundmind

Team Lead, MX Team

- Led mobile, auth server, and web development for B2B apps preinstalled on kids' phones, released on the App Store and Google Play.
- Cut DB write load by 95% in a child location-tracking app by batching location updates in Redis, which ended repeated server outages.
- Added geofence alerts and an OTA update pipeline to the same app.
- Built domain blocking, app blocking, and remote control for a parental device-management app using Samsung Knox, AccessibilityService, and FCM.
- Fixed ANRs in that app by moving slow Knox calls to background threads.
- Separated the auth server from business services and added refresh-token reuse detection, RBAC, audit logging, and blue-green deployment.
- Replaced auth polling between services with webhooks, with retries and a dead-letter queue for failed events.
- Built a Korean speaking test platform for a KOCCA government R&D project and cut STT server calls by about half by encoding audio in the browser.

Jun 2023 - Jun 2024

Purple Academy

Frontend Developer

- Moved the Purple English web app from React to React Native and released it on iOS and Android.
- Built over 5,000 interactive English activities, including alphabet tracing with GSAP and SVG.

Apr 2022 - Mar 2023

IEZLAB

Software Engineer, Development Team 1

- Built a Canvas API tool that splits classical Chinese documents into single characters, and the Spring Boot backend, for AIGOSEO, a government R&D project.

Hackathons

[BUILD WITH TRAE SEOUL](#) · [BYTEDANCE](#) · [GRAND PRIZE](#)

WIGENT: Multi-Agent Debate Platform for Business Ideas

AI agents debate a business idea and turn the result into a landing page. Built the debate screen, live streaming, and the landing page templates.

[GITHUB](#)

[SNOWFLAKE AI & DATA HACKATHON 2026 KOREA](#) · [2ND PLACE, TECH TRACK](#)

WIGTN FLAKE: Purpose-Driven Neighborhood Intelligence Platform

Recommends neighborhoods by combining real estate, foot traffic, card spending, and telecom data. Built three Snowflake Cortex agents and the moderator agent that runs their discussion.

GOOGLE CLOUD RAPID AGENT HACKATHON

Custos: Always-On AI Code Review Bot for GitLab

Reviews GitLab merge requests and keeps checking code after it is merged. Built the post-merge signal collector, skill generation, the ADK triage orchestrator, and incident memory. Google ADK, Vertex AI Gemini, GitLab MCP, Cloud Run.

[GITLAB](#)[DEVPOST](#)

GEMINI LIVE AGENT CHALLENGE · GOOGLE

TimeLens: Multimodal AI Museum Curator

Museum guide that recognizes artifacts through the camera and talks about them in real time. Built the Gemini Live pipeline, voice interruption handling, and artifact restoration images.
